Alessandro Keijock

Applied AI | Agent Deployment | Operational Systems

Milan, Italy | Italian citizen | Fluent English | Open to international relocation

alessandrokey.com | linkedin.com/in/alessandrokeijock

Operations leader and applied AI builder with experience translating frontline service problems into agent workflows, structured knowledge and internal tools. Combines hands-on hospitality operations, workflow design, staff adoption and AI-assisted software development.

Experience

Heart Milan Apartments — CPTO | Dec 2025–present

- Lead product and technology for 82 luxury apartments. Selected and deployed an operations platform, configured its AI agents and workflows, and built the property knowledge base and internal tools.
- Approximately 70% of guest-related chats automated at the six-month checkpoint, supporting eight receptionists, based on internal operating figures.
- Designed maintenance dispatch from guest report through information gathering, scheduling, task acceptance and guest confirmation. Initial checkpoint: 47 live requests without reported corrective intervention.
- Agreed required fields and escalation examples with staff; tested conversations manually and through API-driven simulations. Built damage reporting, automatic shift planning and a 93-chapter operations handbook.

Xenia Milano — COO and Property Manager | Jun 2023–Dec 2025

- Progressed from Property Manager to COO, working alongside the founders as the portfolio grew from 10 to 120+ apartments in approximately 2.5 years. Company exceeded EUR 2M in annual revenue by the end of year two.
- Built operating procedures and handoffs across guest service, onboarding, maintenance, cleaning and inspections; supported more than three apartment launches per month.
- Helped develop an operating structure spanning two maintenance teams, eight in-house cleaners, outsourced cleaning and seven runners. Introduced automation; company reached 80% guest-communication automation.

SoloCorse.com — Account Manager | Feb 2022–Aug 2023

- Managed customer care and e-commerce operations for driving and motorcycle experiences. Maintained catalogue and promotions; researched and negotiated partnerships with circuits, venues and racing teams.

Selected personal projects

Brain — Personal AI Knowledge System. Built ingestion pipelines and an MCP interface for approximately 14,000 linked Markdown notes. Designed knowledge conventions and retrieval/update access for AI tools using AI-assisted development.

Auto-Flip — Used Vehicle Market Analysis. Built a nightly pipeline across two Italian marketplaces, evaluating vehicles across six dimensions and producing research shortlists, ownership-cost estimates and negotiation targets. Supported iteration with automated tests.

Capabilities

Workflow discovery and design • Agent configuration and evaluation • Knowledge systems • API integrations • AI-assisted development • Operational rollout and staff training • Process improvement
